01 / PUBLISH YOUR FIRST AI PROJECT

You made it. Now give it a link.

Take something your AI made, like a calculator or a one-page tool, and turn it into a link other people can open. Ask your agent to put it on Spacefast, or drag the folder onto drop.fast with no terminal and no account.

AT A GLANCE

Who this helps.
People who already build with an AI agent and want a practical way to share the result.

A simple first project.
A single self-contained HTML page works. Spacefast also publishes Next.js, Astro, and TanStack Start projects.

Several routes.
Ask your agent, drop a folder or zip on drop.fast, connect Git, or publish from the command line.

Start free.
Personal is $0 with no card, with 20 Spaces and $1 of usage included each month.

CONVERSION PATH

my.spacefast.com/start

Where to send traffic. Send your audience to my.spacefast.com/start, where they can let their agent set it up, set it up themselves, or connect a Git repository. For a finished file, drop.fast takes a folder or zip.

Who converts. The person who made the project publishes it and sets up their own account when they want to keep it.

What to know. No account is needed to publish. The result includes a claim link. An unclaimed Space serves for 33 hours and 20 minutes after creation or its latest file change, capped at 30 days.

EXAMPLE PROJECT

A workshop budget calculator

Change the headcount and see the total update. One useful interaction gives the audience something concrete to try.

Attendees	**20**
Cost per person	**$15**
Venue cost	**$250**

$550
Illustrative total budget

Illustrative project with fictional inputs. This is not the Spacefast interface or a supplied template.

A PRACTICAL DEMONSTRATION

Follow the project past the first publish.

A small calculator shows creation, sharing, and the next revision in one coherent example.

01 **Define one useful job**
Use three inputs: attendees, cost per person, and venue cost. The total is attendees × cost per person + venue cost. Keep the example independent of outside data.

02 **Create and check the page**
Have an AI tool generate the page. Try the fictional values on page one, then check zero attendees, blank fields, and a narrow screen.

03 **Publish and share**
Ask your agent to put it on Spacefast and the link comes back in the chat, or drop the index.html on drop.fast and claim it with a free account. New Spaces are private, so create a share link or invite people before sending it.

04 **Show the next revision**
Turn on comments for the live page, have a reviewer comment, ask the agent to turn the comment into a fix, and publish again. The same link updates, and an earlier version can be restored.

OPTIONAL STARTING PROMPT FOR AN AI TOOL

```
“Create a single index.html workshop budget calculator with embedded styles and JavaScript. Ask for attendees, cost per person, and venue cost. Show the total and explain the formula. Use clear labels, support mobile screens, and show a helpful message for missing or negative inputs. Keep all calculations in the browser and do not save or send the entries. When it works, publish it to Spacefast as a private Space.”
```

Core talking points

Bring your own AI.
Keep working in Claude, ChatGPT, Cursor, or the agent you already know. Spacefast gives it its own instructions for building well, so the first version is closer to finished.

Use the AI you already pay for.
The AI tool does the building. You pay Spacefast to publish and run what you build.

Sharing is a choice.
Spaces start private. Invite people, create a share link or password, or make it public. A share link works for anyone holding it, and links can be revoked.

The result has a destination.
Each thing you make gets its own Space, with an address people can revisit outside the chat. Publishing again updates it, and retained versions can be restored.

Plans at a glance

	Personal	Go	Pro	Enterprise
Price	$0, no card	$5/month	$15/month	Talk to us
Included usage each month	$1	$5	$15	Contract
Members	1	1	Free up to 5, then $15/month each	Contract
Spaces and custom domains	20	100	500	Custom
Support	Community	Email	Priority email	Dedicated, with SLA

Every plan allows commercial use. Monthly prices in US dollars, before tax. Reviewers and commenters are free.

Angles by partner type

WRITTEN COMPARISONS AND ROUNDUPS

What happens after generation?

Compare the routes from a finished file to a shared link: whether you have to switch AI, whether an account is needed first, how access is controlled, and how updates and rollbacks work. Base judgments about ease on your own testing.

REVIEWS AND EXPLAINERS

The first useful thing to publish

Personal is free with no card, so the calculator concept can be built and published firsthand. Explain the roles: the AI writes the page, and Spacefast hosts it, shares it, and keeps its versions.

VIDEO AND STREAMING

From chat to live link to revision

Record the full loop: the agent returns a live link in the chat, a reviewer leaves a comment, the agent makes the fix, and the same link shows the new version. drop.fast covers creators who want to publish without an account.

Naming and brand usage

Write Spacefast as one word with a capital S, and call each published project a Space. Use the official logos from the Spacefast brand guidelines and never use the Star symbol on its own. Spacefast bills separately from the AI people already pay for, to publish and run their work.

Questions and contact

Have a question we did not cover? Reach out to affiliates@automattic.com and we will get you what you need.
